                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 5
US-08-334-179A-2
i Sequence 2, Application US/08334179A
i Patent No. 6306622
i GENERAL INFORMATION:
i APPLICANT: ROSENBAUM, JAN S.
i APPLICANT: ROSENBAUM, JAN S.
i APPLICANT: ROHNO, TSUTOWU
i TITLE OF INVENTION: CDNA ENCODING A BMP TYPE II RECEPTOR
NUMBER OF SEQUENCES: 14
i CORRESPONDENCE ADDRESS:
i ADDRESSEE: THE PROCTER AND GAMBLE COMPANY
is STREET: 11810 EAST MIAMI RIVER ROAD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 582;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ·.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 19, Application US/08979608A
Patent No. 635451
GENERAL INFORMATION:
APPLICANT: Lees, Ann M.
Lees, Robert S.
Law, Simon W.
Arjona, Anibal A.
TITLE OF INVENTION: NOVEL LOW DENSITY LIPOPROTEIN
BINDING PROTEINS AND THEIR USES IN DIAGNOSING AND
TREATING ATHEROSCLEROSIS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
APPLICANT: Tibbetts, Scott
TITLE OF INVENTION: Peptide Compositions Which Induce Immune
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
ADDRESSEE: HOVEY, WILLIAMS, TIMMONS & COLLINS
STREET: 2405 Grand Boulevard, Suite 400
CITY: Kansas City
STATE: MO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB 3; Length 12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               COUNTRY: USA

Sequence 29, Application US/08844978
Patent No. 6075004
GENERAL INFORMATION:
APPLICANT: Benedict, Stephen
APPLICANT: Chan, Marcia
APPLICANT: Tibbetts, Scott
TITLE OF INVENTION: Peptide Compositions Which Induce Immune
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
ADDRESSEE: HOVEY, WILLIAMS, TIMMONS & COLLINS
STREET: 2405 Grand Boulevard, Suite 400
CITY: Kansas City
STATE: MO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             APPLICANT: Stablan, Teruna

US-09-890-549-4 Title: Perfect score: Sequence:

733937 segs, 200641211 residues OLIGO Gapop 60.0 , Gapext 60.0

Scoring table:

Searched:

Total number of hits satisfying chosen parameters: Word size :

733937

Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Post-processing: Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Patent No. US2002013753A1

GRDERAL INFORMATION:

APPLICANT: Rosen et al.,

TITLE OF INVENTION: Wucleic Acids, Proteins, and Antibodies

FILE REFERENCE: PT223 Wucleic Acids, Proteins, and Antibodies

FILE REFERENCE: PT223 Wucleic Acids, Proteins, and Antibodies

FILE REFERENCE: PT223 Wucleic Acids, 864

CURRENT FILING DATE: 2001-01-17

New human lipid-associated proteins, nucleic acids, and antibodies, useful for diagnosis, treatment and prevention of e.g. cardiovascular disease

Claim 1; Page 76-77; 93pp; English.

Lipid-associated proteins (LIPAP) can be used for treating or preventing disorders associated with decreased expression of LIPAP, or streening for agonists or antagonists of LIPAP, and to raise specific antibodies. Antagonists and antagonists of LIPAP, and to raise for treating diseases associated with reduced or increased levels of LIPAP, e.g. cardiovascular, neurological and gastrointestinal diseases and disorders of lipid metabolism. Fragments of the nucleic cid encoding LIPAP are useful for detection of full length coding sequences, in hybridization and/or amplification assays or for diagnosis or monitoring. Nucleotides encoding LIPAP are used for compounds that specifically modify LIPAP expression, for recombinant production of LIPAP, in gene therapy, as a source of therapeutic antisense, triplex-forming, or ribozyme agents and for genomic mapping Antibabodies to the proteins are used for diagnosis and monitoring of LIPAP-associated disease by immunoassay, as a nutagonists, in competitive drug screens and for affinity purity and LIPAPP.

This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity and to down regulate expression and activity on may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a polypeptide described in the disclosure of the invention. 240 180 120 LSSSTFDSERNESRRNLELPRLSETSIKDRMAKYQAAVSKQSSSTNYTNELKASGGEIKI 300 420 LSPDSRASSLSESSPPKAMKKFQAPARETCVECQKTVYPMERLLANOOVFHISCFRCSYC 420 480 480 540 900 909 999 9 οţ 1 MESSPFNRRQWISLSLRVIAKELSLVNKNKSSAIVEIFSKYQKAAEFINMEKKRSNIFNL EEQIHPRSKLKSPPEALVQGRYPHIKDGEDLKDHSTESKKMENCLGESRHEVEKSEISEN TDASGKIEKYNVPLNRLKWMFEKGEPTQTKILRAQSRSASGRKISENSYSLDDLEIGPGQ SQHFRKGTLTVLXXXXWENPGLGAESHTDSLRNSSTEIRHRADHPPAEVTSHAASGAKADQ EEQIHPRSRLRSPPEALVQGRYPHIKDGEDLKDHSTESKKMENCLGESRHEVEKSEISEN TDASGKIEKYNVPLNRLKMMFEKGEPTOTKILRAQSRSASGRKISENSYSLDDLEIGPGO 1 MESSPFNRRQWTSLSLRVTAKELSLVNKNKSSAIVEIFSKYQKAAEETNMEKKRSNTENL LSSSTFDSEKNESRRNLELPRLSETSIKDRMAKYQAAVSKQSSSTNYTNELKASGGEIKI HKMEQKENVPPGPEVCITHQEGEKISANENSLAVRSTPAEDDSRDSQVKSEVQQPVHPKP LSPDSRASSLSESSPPKAMKKFQAPARETCVECQKTVYPMERLLANQQVFHISCFRCSYC NNKLSLGTYASLHGRIYCKPHFNQLFKSKGNYDEGFGHRPHKDLWASKNENEEILERPAQ NNKLSLGTYASLHGRIYCKPHFNQLFKSKGNYDEGFGHRPHKDLWASKNENEEILERPAQ LANARETPHSPGVEDAPIAKVGVLAASMEAKASSQQEKEDKPAETKKLRIAWPPPTELGS SGSALEEGIKMSKPKWPPEDEISKPEVPEDVDLDLKKLRRSSSLKERSRPFTVAASFQST SGSALEEGIKMSKPKWPPEDEISKPEVPEDVDLDLKKLRRSSSLKERSRPFTVAASFQST SVKSPKTVSPPIRKGWSMSEQSEESVGGRVAERKQVENAKASKKNGNVGKTTWQNKESKG SVKSPKTVSPPIRKGWSMSEQSEESVGGRVAERKQVENAKASKKNGNVGKTTWQNKESKG Nucleic acids having the sequences of clones isolated from libraries different human tissues, useful in recombinant DNA methodologies -Gaps .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with noctropic, immunosuppressant and cytoscatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as lateral sectoris and central nervous system diseases, uncopathie attacal sclerosis, and Shy. Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activitities in thrombolytic activity, cancer diagnosis and therapy, drug screening, and thrombolytic activity, arthritis and inflammation, leukaemias and

The present sequence represents a human EPLIN (epithelial protein lost in neoplasm)-beta isoform. The specification also describes EPLIN-alpha.

EPLIN is a tumour suppressor protein, whose expression is altered in multiple common human tumour types. EPLIN nucleic acids and proteins are used in screening assays to detect molecules that specifically bind to EPLIN nucleic acids, proteins or derivatives and thus have potential use as agonist or antagonist of EPLIN, in particular molecules that affect call proliferation. Thus the assays are useful for screening molecules with potential utility as anticancer drugs or lead compounds for drug development. EPLIN nucleic acids, proteins are useful for detecting a cell proliferative disorder in a subject. EPLIN polynucleotides are useful in gene therapy techniques. EPLIN is useful as a marker that can be diagnostically, prognostically and therapeutically used over the course of a cell proliferative disorder associated with EPLIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New tumor suppressor protein EPLIN, useful as a marker for diagnostic, prognostic and therapeutic applications over the course of cell proliferative disorders associated with EPLIN
                                                                                                                                                                 TIL

The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiomascular disease, diabetes mellitus, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, aschma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive. The present invention describes primer sets for synthesising 5602

tull-length cDNAs defined in the specification. Where a primer set

CC full-length cDNAs defined in the specification. Where a primer set

CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary strand of a polymucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprising a sequence complementary to the complementary strand of a polymucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a complementary strand of a polymucleotide which comprises a 3'-end sequence. Where the complementary to a sequence and sequence is necessary and the combination of the 5'-end sequence() and sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              662
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360
in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH13642 represent human cDNA sequences; AAB92446 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GKRSKEGHSLEMENENLVENGADSDEDDNSFLKQQSPQEPKSLNWSSFVDNTFAEEFTTQ 722

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel human nucleic acid sequences from normal breast tissue which have cytostatic activity. The nucleic acid sequences can be used to produce and isolate full-largth gene sequences. They can be used to express proteins, which can be used as tools to find an activity against breast cancer. The sequences can be used in sense or antisense form. They are especially useful for medicaments for gene therapy to treat breast cancer and for treating illnesses associated with far metabolism. AAY48456-Y48539 represent protein fragments encoded by the expressed sequence tags described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          468
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180

protein lost in neoplasm)-alpha isoform. The specification also describes EPLIN-beta.

BPLIN is a tumour suppressor protein, whose expression is altered in multiple common human furnour types. EPLIN nucleic acids and proteins are used in screening assays to detect molecules that specifically bind to EPLIN nucleic acids, proteins or derivatives and thus have potential use as agonist or antagonist of EPLIN, in particular molecules that affect with potential utility as anticancer drugs or lead compounds for drug development. EPLIN nucleic acids, proteins are useful for detecting a cell proliferation that as subject. EPLIN polymorleocides are useful in gene therapy techniques. EPLIN is useful as a marker that can be diagnostically, prognostically and therapeutically used over the course of a cell proliferative disorder is EPLIN is useful as a marker that The present sequence represents a human EPLIN (epithelial

The polynuclectide sequences given in AACS9499 to AACS9497 encode the human secreted proteins given in AAB34092 to AAB34140. AAB34141 to AAB34216 represent human secreted polyneptide sequences and proteins conditions to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissue of invention. Human secreted proteins have activities based on the tissue of and cells the genes are expressed in. Examples of activities include:

C and arthritic; immunosuppressive; antirheumatic; antiproliferative; creation; cardiant; vasotropic; crebroprotective; noorropic; cheuroprotective; antibacterial, virucide; fungicide; ophthalmological; and vulnerary. The polynuclectides and polypeptides can be used to conspict of an ameliorate a medical condition in e.g. humans, mice, rabbits, poars, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a autoimmune diseases, hyperproliferative disorders e.g. neoplasms or

                                       The invention relates to a novel human sterol regulatory element binding protein 3 (hSREB-3) expressed in human normal hypothalamic tissue and its coding sequence. Also described is the process for preparing the protein and nucleic acid sequence, and the method for detecting hSREBP-3 nucleic acid sequence and polypeptides. The present sequence represents the amino acid sequence of human hSREBP-3 as described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PKSLNWSSFVDNTFABEFTTQNQKSQDVELWEGEVVKELSVEEQIKRNRYYDEDEDEE 457

New nucleic acid molecules encoding 49 human secreted proteins for diagnosing, preventing or ameliorating medical conditions and used for food additives or preservatives -

```
Polymorlectide sequences AAC9344'y - AAC93257 represent CDNA encoding human secreted proteins AAB51827 - AAB51875. Sequences AAB51876 - AAB51927 represent alternative polypeptides encoded by the genes, and amino acid sequences with which they share homology. The genes and cannot be acid sequences with which they share homology. The genes and proteins have activities dependent on the tissues and cells in which they are expressed. Examples of their activities include immunosuppressive, antiathritic; antirheumatic; antiproliferative; cytostatic, cardiant; consorted; ungicide; opthalmalogical, and wulnerary. The secreted virucide; fungicide; opthalmalogical, and wulnerary. The secreted contracting, preventing and/or diagnosing diseases and disorders such as autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative cureating, preventing and/or diagnosing diseases and disorders such as autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative consorted arthritis, hyperproliferative disorders consorted by bacteria, viruses and fungi and ocular disorders of angiogenesis, nervous system disorders e.g. Alzheimer's disease. Corneal infections reservors before transplantation, for supporting cell culture of prinary infections to regenerate tissues and in chemotaxis. The culture of prinary tissues, to regenerate tissues and in chemotaxis. The colleure of prinary virualis, minerals, cofactors and other nutritional components. Oligomuclectides AAC94470 - AAC94478 and peptide AAB51826 are components. Oligomuclectides AAC94470 - AAC94478 and peptide and characterisation of the proteins and culture or preservative to components. Oligomuclectides AAC94470 - AAC94478 and peptide and characterisation of the proteins and characterisation of the proteins and characterisation of the proteins and characterisation of the proteins and characterisation of the proteins and characterisation of the proteins and characterisation of the proteins and characterisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        592

                                                                                                                                                                                                                                                                                                                          AXCS8773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to proteins, called pancreatic cancer antigens have cytostatic, cancer antigens have cytostatic, cancer antigens have cytostatic, cancer antigens have cytostatic, noutroprotective, nootropic, immunomodulatory, relaxant, contraceptive, cytostective, neuroprotective, mostropic immunomodulatory, relaxant, contraceptive, cytostective, neuroprotective, and anticording an endical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the cytosteins can be identified. The pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer. Cytoceins and antagonists to the antigens can be screened for. The pancreatic cancer antigens can be used to design nucleic and hybridisation probes that can be used in chromosome mapping, linkage and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including to both in vivo and in vitro diagnostic and therapeutic methods. The cortic of proteins can be used to proteins can be used to proteins can be used to protein cancer the polypeptides, including cytoteins can be used to pract or treat or prevent neural immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal or prevent cytos proliferative disorders. ô

This invention describes novel polypeptides and their encoding nucleic acids derived from human pancreatic tumor tissue which have cytostatic activity. The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AA773814-Y74252 represent protein fragments encoded by the human pancreatic tumor cDNA library defined expressed sequence tag (EST) sequences represented in

AAZ52858-Z53014.

New human nucleic acid sequences from pancreatic tumors, and related

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

Claim 20; SEQ ID No 54449; 103pp; English

The invention relates to isolated polymucleotide (I) and properiode (II) sequences. (I) is useful as hybridisation probes, colymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The chromosome cand gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in gene therapy techniques controlled in generating and polymer as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical ingestion of sites expressing (II). (I) and (II) are useful in medical consistive controlled in generations in the polypeptide and polymerleders enversations in the printed and products dependent on DNA and to produce other types of data and products dependent on DNA and conflictation, but was obtained in electronic format directly from WIPO controlled in the printed controlled in the printed controlled in the printed controlled in the printed controlled in the printed controlled in the printed controlled in the printed controlled in the printed controlled co
